

A. ML-axis rotation

Isolated positive rotation; schematic

B. AP-axis rotation

Isolated positive rotation; schematic

C. CC-axis rotation

Isolated positive rotation; schematic

D. Translation at a common point

$$\mathbf{d} = \mathbf{P}^T [T_I(p_c) - T_S(p_c)]$$

E. Bone geometry included

Left and right hip bones + sacrum

F. Size and surface measures

$$V = \sum_{b=1}^3 V_b$$

$$A = \sum_{b=1}^3 A_b$$

$$s = (V/V_{\text{template}})^{1/3}$$

V : enclosed bone volume (cm^3)

A : bone surface area (cm^2)

s : dimensionless scale
